

The Man of the Shroud

FRAME INSTALLATION

The frame is easiest to erect with two or three people helping and two tables set end-to-end.

- The frame consists of: (see illustration on page 2)
 - 3 Vertical Poles (A)
 - 3 Telescope poles (B)
 - 4 5' horizontal poles (C)
 - 4 2' horizontal poles (D)
 - 1 Top T joint (E)
 - 1 Middle T joint (F)
 - 2 Left and right top ell corners (G)
 - 2 Left and right middle ell corners (H)
 - 3 Wheel set footplates (I)
- The poles are recognizable and snap easily together.
- If possible assemble four eight foot tables like the picture below.

- Attach the 3 vertical poles (A) to the left and right top corners (G) and the middle T joint (E).
- Attach 3 vertical telescope poles (B) to the vertical poles (A). These poles are adjustable so be sure all are attached at the same point.
- Lay these assemblies on the tables to the left and right and middle.
- Slide the middle T joint (F) and the left and right middle ell corners (H) on to their respective assemblies.
- Connect the four 5' horizontal poles (C) to the four 2' poles (D) and lay them between the between the vertical poles. Do not attach them to the vertical poles at this time.
- Please remember this is an exact replica of the Holy Shroud in Turin. Please handle with the utmost respect and only handle the canvas with the surgical gloves provided. Thank you.
- At this point unfold the Shroud replica and place it lengthwise on the table. The face of Jesus should be on the left side. The backside of the canvas is clearly labeled.
- Carefully take an upper horizontal pole (C D) and place it through the loop on left side top of the canvas. (Make sure the snap button is pointed toward the canvas. It goes in easier that way.) Then snap it into the left corner (G) and the middle T joint (F). Repeat the process for the other three horizontal poles.
- Snap the wheel set footplates (I) to the vertical poles (B).
- Carefully stand the frame up.
- You can adjust the canvas by pulling the loops horizontally and adjust the Middle T joint (F) and the left and right middle ell corners (H) vertically so that there are no wrinkles
- The set screws on the Middle T joint (F) and the left and right middle ell corners (H) should be loose. You may tighten them when the canvas is positioned properly.
- You may now roll the exhibit to where ever you want it.
- There are six snap on lamps. Place them evenly across the top of the frame. Adjust the lamps to cover the canvas as much as possible.

All horizontal poles: 61" male pole section + 29" female pole section
